

Achilli	Achilli was founded 11 March 1950 as a general engineering and metalworking company, and a few years later began to specialize in the production of floor grinding and polishing machines. Over the years the company has continued to expand by entering new fields of industry such as "Building" and "Stonework" gaining considerable recognition and success especially in the international market. Achilli offers creative solutions in stone working and cutting techniques and a positive response to the ever more demanding requirements of the stone professionals. Today the company focuses on a product innovation process aimed at making "advanced functions" affordable for most stone fabricators. In the past these features were only available on very expensive and sophisticated machines. The new models currently offered can be customized to the clients' requirements through the use of intuitive and safe long-lasting technology. Artec	Artec offers its customers all the know-how gathered in 30 years of experience in the field of pneumatic components for automation. This is one of Artec's strong points: advanced technical skills acquired over years in the business, plus productive and commercial flexibility, rapid delivery and constant technical service. From design to production, everything is done on site, in a quality cycle entirely made in Italy. Another distinctive feature is the company's ability to customise its products according to their specific applications: there are no standard solutions, but every solution is specifically tailored to the individual customer's needs, to optimise the results of every particular use. The result of this way of thinking, producing and distributing is a range of compact cylinders covering all the needs of the pneumatic automation industry.
